SpectraSensors SS2100i-2 Process Gas Analyzers are exceptionally reliable for measuring trace gas components using tunable diode laser absorption spectroscopy technology (TDLAS). TDLAS is a high-resolution infrared technique that enables the measurement of specific gases with precision while avoiding interferences that are common with traditional infrared analyzers. The SS2100i-2 is certified for ATEX, IECEX, CNEx, KC, and CCOE.

Simple operation The operation of the analyzer is very straightforward. Most technical personnel can learn to operate the system in a very brief time. When coupled with the fact the analyzer has very little maintenance requirements, the end result is an extremely low cost of ownership.

At the same time, technical support capability is a crucial element of the product

design. There are several health monitoring parameters and remote access is available using service software or directly through the touch sensitive keypad.

Trouble-free installation The SS2100i-2 is easy to install; connect the power, data link and measured gas line and the analyzer begins working without the need for extensive calibrations or setup.

Reliable Trustworthy measurements are vital in process analytical applications. The TDLAS sensor is unaffected by contaminants and corrosives since the gas stream never touches the laser or detector. The SS2100i-2 requires little regular maintenance and does not need recalibration or periodic replacement parts due to the inherent stability of TDLAS technology.
